WHAT AM I?

"I am a validation method which is often used for data with a regular pattern. I work particularly well with things like postcodes when the pattern of letters and numbers are always in the same order."

ANSWER ....

"I am a validation method that you would use to make sure that an important field such as surname or phone number is never left blank in your database."

ANSWER ....

"I am a validation method which you might use if you want to make sure people enter sensible values. For example, if the most expensive item you sell is £100 then I could stop £101 from being entered"

ANSWER ....

"I am a type of validation which will use last one or two digits in a code to check that the other digits in the code are correct"

ANSWER ....

"I am a term which means to check that the data you have entered, exactly matches your original source data."

ANSWER ....
